

```
{  
    "_id": <ObjectId>,  
    "username": "string",  
    "password": "hashed string",  
    "added_recipes": [  
        List/array of <ObjectId>  
    ],  
    "liked_recipes": [  
        List/array of <ObjectId>  
    ]  
}
```

*****The password is hashed before it is stored in the database, and the hashed value is stored as a string in the database.**

*****The added_recipes field will include a list of recipe ObjectIds added by the user – this will allow us to access the relevant recipe’s details by its ObjectId when displaying it on the front-end.**

*****The liked_recipes field will include a list of recipe ObjectIds liked by the user – this will allow us to access the relevant recipe’s details by its ObjectId when displaying it on the front-end.**
