Supporting Collections

Rating Collection – these will be the values for the dropdown menu for the "rating" field in the add & edit recipe pages, and also the summary and full recipe pages, which will then feed into the relevant fields in the sample-recipe collections when submitted

```
{
        "_id": <ObjectId>,

        "rating": [

                List/array of ints (1-5)

        ]

}
```

Time Collection – these will be the values for the dropdown menus for the "prep_time" and "cook_time" fields in the add & edit recipe pages, which will then feed into the relevant fields in the sample-recipe collections when submitted

```
{
        "_id": <ObjectId>,

        "time": [

                "List/array of strings"

        ]

}
```

Serves Collection – these will be the values for the dropdown menu for the "serves" field in the add & edit recipe pages, which will then feed into the relevant fields in the sample-recipe collections when submitted

```
{
        "_id": <ObjectId>,

        "serves": [

                "List/array of strings"

        ]

}
```

Categories Collection – these will be the values for the dropdown menus for the "type", "occasion", "cuisine" and "main_ingredient" fields in the add & edit recipe pages, which will then feed into the relevant fields in the sample-recipe collections when submitted (if I include the functionality for the user to add categories, any new categories will be added to the relevant list in this collection, which will then be reflected in the relevant dropdown menus)

```
{
        "_id": <ObjectId>,

        "categories": {

                "type": [

                        "List/array of strings"

                ]

                "occasion": [

                        "List/array of strings"

                ]

                "cusine": [

                        "List/array of strings"

                ]

                "main_ingredient": [

                        "List/array of strings"

                ]

        }

}
```
